

## **NATIONAL VENDOR DECLARATION (NVD) SCANNING**

### **CASTERTON SALEYARDS**

National Vendor Declaration (NVD) scanning is now part of the NLIS scanning and presale checking process at the Casterton Saleyards. The saleyard computer software has been upgraded to allow the interfacing of the current system with NVD scanning software.

Benefits of the NVD scanning system include:

- faster recording;
- reduction in errors;
- electronic documentation which can be retrieved in seconds;
- electronic filing as opposed to manual filing;
- underpinning of the integrity of NLIS database and lifetime traceability.

The software scans in the information from the written NVD form. It then electronically matches the information with the lifetime traceability of individual animals.

The system allows for critical information to be displayed for buyers on pre-sale catalogues and summaries allowing for problems to be found prior to sales occurring. The system will provide for improved record-keeping within the industry and reduce the time and transfer costs of relevant NLIS and NVD information.

At the completion of the sales information can be transferred electronically to buyers at the click of a button.

#### **National Vendor Declarations (NVD)**

As a producer the NVD is a vital part of your business, producers should ensure NVD's are completed fully and accurately. The document should NEVER be voided.

Only the vendor or the person responsible for the husbandry of the cattle may make, amend or sign an NVD form.
